

Scoring Information

SCI-QOL, SCI-FI, and TBI-QOL Short-Form

1. After a participant has answered all of the questions on the short-form, sum the responses on the form to create a raw score. The participant should answer all of the questions.
2. Convert that raw score to an IRT-based *T*-score using the appropriate lookup table. The *T*-score value for a raw score on the short-form will be directly comparable to the *T*-scores that are obtained through the Computer Adapted Test (CAT) administration.

The lookup table for the scale you requested follows this page.

The **higher the score**, more of the construct of ambulation is being measured.

A **higher score** represents more ambulation (better functioning).
